Cardiovascular Tissue Engineering and Regeneration based on Adipose Tissue-Derived Stem/Stromal Cells

Mojtaba Parvizi

This project was financially supported by:

University Medical Center Groningen, Graduate School of Medical Science

This research forms part of the Project ICARUS of the research program of the BioMedical Materials institute, co-funded by the Dutch Ministry of Economic Affairs. The research described in this thesis was supported by a grant of the Dutch Heart Foundation (DHF-2009T076).

And

Financial support by the *Dutch Heart Foundation, University of Groningen, University Medical Center of Groningen, and Graduate School of Medical Science* for the publication of this thesis is gratefully acknowledged.

 groningen

Cardiovascular Tissue Engineering and Regeneration based on Adipose Tissue- Derived Stem/Stromal Cells

PhD thesis

to obtain the degree of PhD at the
University of Groningen
on the authority of the
Rector Magnificus Prof. E. Sterken
and in accordance with
the decision by the College of Deans.

This thesis will be defended in public on
Wednesday 15 June 2016 at 14.30 hours

by

Mojtaba Parvizi

born on 6 July 1982
in Tabriz, Iran

Supervisors

Prof. M.C. Harmsen

Prof. M.J.A. van Luyn

Assessment Committee

Prof. J.L. Hillebrands

Prof. D. Grijpma

Prof. J. Krieger

*Dedicated to my parents,
My wonderfull wife
and son
with great affection and love*

Paranimfen

Vincenzo Terzzili

Joris Anton van Dongen

CONTENTS

Chapter 1.	General Introduction	9
Chapter 2.	Development of Recombinant Collagen-Peptide-Based Vehicles for Delivery of Adipose-derived Stromal Cells (ADSC)	19
Chapter 3.	Differential Mechanisms of Myocardial Conduction Slowing by Adipose Tissue-Derived Stromal Cells Derived from Different Species	47
Chapter 4.	Recombinant Collagen-like Peptide Biomaterial Mitigates Adverse Paracrine Effects of Adipose Tissue-derived Stromal Cells on Myocardial Conduction in Monolayers of Cardiomyocytes	69
Chapter 5.	Recombinant Collagen-based Microspheres for Soft Tissue Repair	91
Chapter 6.	Efficient Generation of Smooth Muscle Cells from Adipose-derived Stromal Cells by 3D Mechanical Stimulation can Substitute the Use of Growth Factors in Vascular Tissue Engineering	111
Chapter 7.	Therapeutic Prospect of Adipose-Derived Stromal Cells for Treatment of Abdominal Aortic Aneurysm	133
Chapter 8.	Perivascular Scaffolds Loaded with Adipose Tissue-Derived Stromal Cells Attenuate Progression of Abdominal Aortic Aneurysm in Rats	157
Chapter 9.	Summary and General Discussion	179
Chapter 10.	Future Perspective	187
Chapter 11.	Nederlandse Samenvatting	191
Appendix.	Acknowledgment	198
	Curriculum Vitae	201
